SUMMARY

Software Engineer specializing in scalable backend solutions and DevOps practices. Experienced in building robust systems using Laravel, AdonisJS, NestJS, and modern frontend frameworks, optimizing performance and enhancing user engagement. Skilled in integrating real-time updates and APIs, significantly improving system reliability. Passionate about clean architecture and delivering maintainable, high-quality applications that effectively meet user needs.

TECHNICAL SKILLS

Languages & Frameworks

PHP, TypeScript, JavaScript, SQL, Laravel, tRPC, AdonisJS, NestJS, NextJS, Tailwind CSS, Livewire, FilamentPHP, Node.js.

Databases & Tools

MySQL, Redis, PostgreSQL, MongoDB, Git, GitHub, Composer, Yarn, NPM.

DevOps & Cloud

Docker, Jenkins, Nginx, PM2, CI/CD, Linux Server Administration, AWS (EC2, S3), Azure, GCP, VPS Management

Architecture & Concepts

OOP, MVC, DRY Principle, RESTful APIs, Event-Driven Architecture, Microservices, Clean Architecture, Repository Pattern, Agile Methodologies, TDD.

PROFESSIONAL EXPERIENCE

Backend/DevOps Engineer | Contract

Odenbridge Technologies(QwikFleet Project)

AUGUST 2025 - NOVEMBER 2025 | Remote

QwikFleet operates an Integrated logistics platform for multimodal courier services

Tech Stack: Laravel, Reverb, MySQL, FCM, Redis, WebSockets, Paystack.

- Built and maintained the backend for a multi-role logistics platform serving 10,000+ daily transactions (Admin, Rider, Customer).
- Engineered real-time tracking via WebSockets and FCM, achieving an average update latency of less than 500ms for instant order monitoring.
- Reduced task processing time by 100ms by designing and deploying event-driven workflows utilizing Redis, handling 10,000+ daily logistics transactions.
- Accelerated address validation accuracy by 98% by integrating the Google Maps Platform for precise route calculation and location-based address validation.
- Expanded the system to support 3+ multimodal delivery options (bike, car, truck, etc.), effectively expanding service coverage.
- Developed a robust add-on pricing engine, boosting revenue from ancillary services by 8% through strategic pricing and improved customer conversion during peak hours.
- Oversaw high-availability VPS provisioning and streamlined deployment pipelines, increasing deployment frequency by 50% while maintaining 99.9% system uptime.
- Established comprehensive unit and feature tests (TDD approach) and rate limiting on all external endpoints to mitigate web vulnerabilities and maintain high code quality.
- Authored and documented RESTful APIs using Scribe, ensuring data integrity and ease of consumption by multiple client applications (web/mobile).

Backend/DevOps Engineer | Contract

Robex Technologies Ltd(MichPro)

AUGUST 2024 - JANUARY 2025 | Remote

MichPro operates a specialized e-commerce platform for high-end mobile accessories and power solutions

Tech Stack: Laravel, MySQL, Redis, WebSocket, Paystack, Opay, Flutterwave.

- Authored core e-commerce backend logic, curating a product catalog of 500+ high-end accessories.
- Created and launched a gamified M-Coin loyalty and referral system that directly contributed to a 25% increase in user sign-ups and elevated long-term user retention.

- Executed 10+ optimization tasks across database queries and API routing, reducing system response time by 15% and boosting system efficiency by 10% across peak usage periods.
- Ensured 99.9% data integrity and system scalability to successfully handle 5,000+ daily active users during peak sales cycles.
- Collaborated with the frontend team to ensure seamless and efficient API integration, facilitating a smooth and responsive shopping experience.
- Managed the integration and lifecycle of multiple payment gateways (Paystack, Opay, Flutterwave), guaranteeing redundancy and transaction security for the e-commerce checkout flow.
- Oversaw the CI/CD pipeline and deployment across three distinct environments (Development, Staging, and Production), reducing deployment risks by 30% and enabling safer feature testing.
- Designed and documented RESTful APIs using Scribe, ensuring data integrity and ease of consumption by multiple client applications (web/mobile).

Backend Engineer | Contract

Litano Pro

JULY 2024 - AUGUST 2024 | Remote

P2P cryptocurrency exchange platform focused on fast, secure USDT trading and cash transfers. Tech Stack: Laravel, MySQL, Redis, CI/CD, VPS Management, RESTful APIs, Repository Pattern, WebSockets.

- Resolved 20+ critical bugs and launched 5 new features, improving user satisfaction by an estimated 12% on the exchange platform.
- Automated CI/CD pipelines (using Laravel Forge/Runners), which reduced deployment time by 50%, ensuring reliable system updates through key DevOps tasks.
- Engineered secure and highly available RESTful API endpoints for core USDT trading and fiat cash transfer capabilities.
- Implemented real-time transaction tracking utilizing WebSockets and Redis to provide instant order confirmation and critical status updates for users.
- Designed and optimized database schemas and utilized the Repository Pattern to ensure maintainable data access for user wallets and transaction records.
- Managed VPS hosting, security hardening, and performance optimization for the production server, ensuring 99.9% uptime during the contract period.

ADDITIONAL EXPERIENCE (Telescoped)

Software Engineer

ChessOnChain

July 2024 - Aug 2024

Fixed 20+ bugs for a Web3 chess platform on Polkadot blockchain.

Backend Developer

Shwid Logistics

Dec 2023 - July 2024

Built system for 10,000+ monthly transactions with 99% uptime.

EDUCATION

B.Eng Production Engineering

University Of Benin

JULY 2023 | Benin City

SSCE

Federal Science & Technical College

OCTOBER 2016 - JULY 2022 | Uromi

LANGUAGE

ENGLISH C1
